

64-bit UltraSPARC™

Speed & Performance in the Highest Class

The winds of change are bringing the advanced power of 64-bit UltraSPARC™ to the desktop. Never before has so much performance been neatly tucked into a supercharged fully Sun® compatible workstation from Tatung.

Tatung, the leading manufacturer of Sun compatibles, is proud to announce the COMPstation U Series as flagship products in their ever expanding workstation and server line. As with all Tatung workstations, the U Series is designed and manufactured in the U.S.A.

The secret to UltraSPARC's awesome power is the UltraSPARC Port Architecture (UPA) which, combined with other features, makes this a supercomputer class machine on the desktop. UPA offers much higher bandwidth compared with previous bus technologies and combines with the groundbreaking Visual Instruction Set (VIS) to create outstanding performance leaps for Engineering, Multimedia, Commercial and Internet/Intranet applications.

Tatung offers quality products, flexible/customized system configurations and superior service and support. Call Tatung today at 1-800-659-5902.

Tatung's full line of UltraSPARC, SuperSPARC, hyperSPARC, microSPARC workstations and servers
